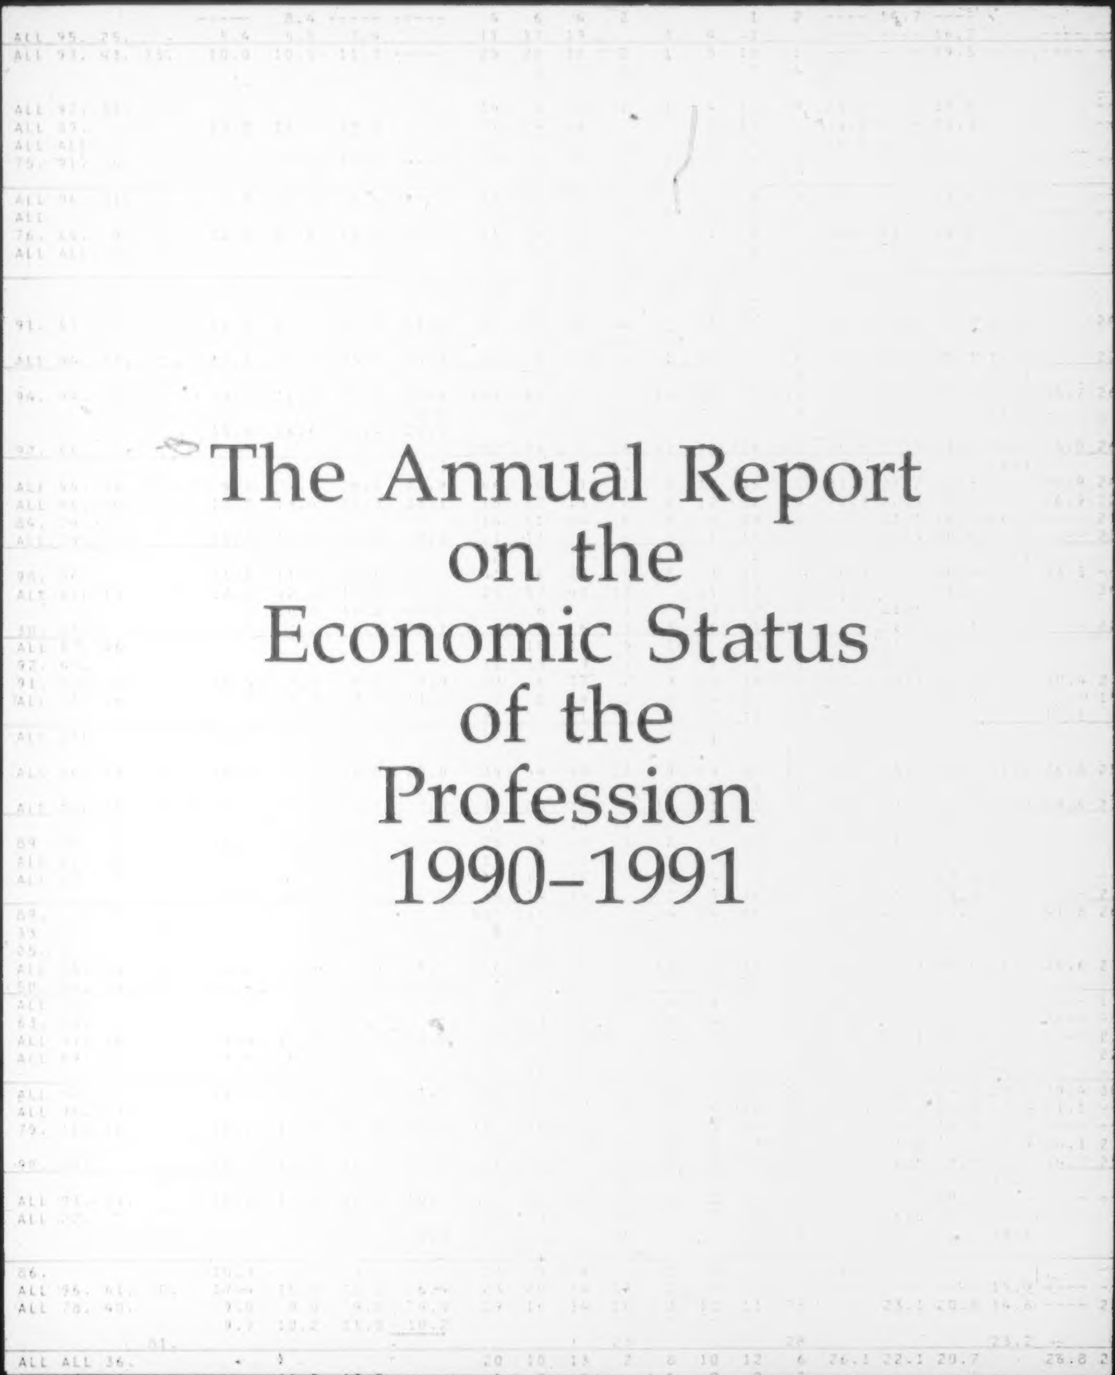
ACADEME

BULLETIN OF THE AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS

MARCH-APRIL 1991

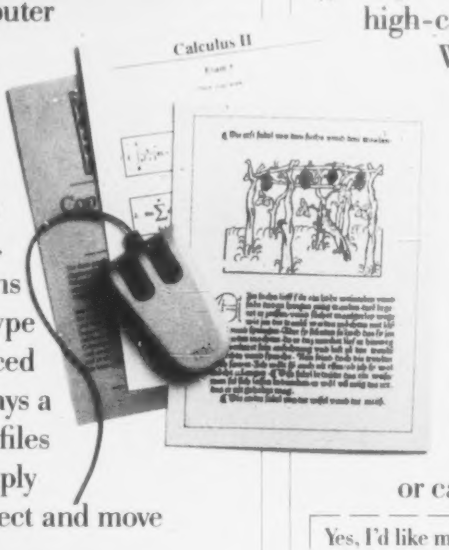


The Annual Report on the Economic Status of the Profession 1990–1991

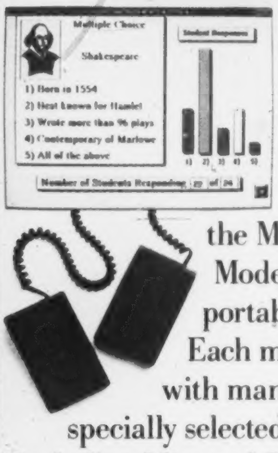
SPECIAL ISSUE

Designed for ease of use

Even with limited computer experience, you'll feel right at home with this system. Built-in tutorials and faculty-written examples free you from a long learning process. Easily recognizable icons eliminate the need to type commands. The Advanced Academic System displays a variety of "windowed" files simultaneously. You simply point your mouse to select and move through programs.



The PS/2 preloaded with useful software



Multiple Choice

Shakespeare

1) Born in 1554
2) Best known for Hamlet
3) Wrote more than 96 plays
4) Contemporary of Marlowe
5) All of the above

Number of Students Responding 22 of 24

The Advanced Academic System is available with three models of the IBM Personal System/2:® the Model 70 (121), the Model 55 SX (061) and the portable Model P70 (121). Each model comes preloaded with many software programs specially selected for faculty needs, including Microsoft® Windows™ 3.0 and Asymetrix ToolBook.™ As a result, you don't have to research, purchase and install individual software packages.

The system comes ready to go. Each PS/2® model features a mouse, high-speed processing, large memory and high-capacity storage.

We have listened to the needs of college faculty and the result is a personal computer solution that is focused on the tasks of higher education. It means new freedom to express your ideas more clearly, more forcefully and more effectively.

To learn more, visit your campus location. For a brochure, use the coupon below or call 1 800 IBM-6676, ext. 890.

Yes, I'd like more freedom of expression. Please send me your brochure on the new Advanced Academic System.

The Future of Academic Salaries: Will the 1990s Be a Bust Like the 1970s or a Boom Like the 1980s?

☐ Real salary levels *decreased* by 0.6 percent for the first time since 1981-82.
☐ Increases in salary for continuing faculty averaged 6.6 percent, an only 0.6 percent increase in purchasing power.
☐ The overall salary level is still about 8 percent lower in 1990-91 than it was two decades ago.
☐ The salary level for continuing faculty fell almost 12 percent in real terms between 1971-72 and 1980-81. In contrast, between 1980-81 and 1990-91, the salary level for continuing faculty rose by over 27 percent in real terms.
☐ Budget difficulties and financial problems in state governments will have a substantial effect in academia, where 70 percent of all full-time faculty are employed at public institutions.
☐ Salary levels averaged $49,320; $41,830; $35,480; and $35,960 for doctoral-level, comprehensive, general baccalaureate, and two-year institutions, respectively.

These highlights and others are discussed in the report by Professor Ronald G. Ehrenberg, chair of AAUP's Committee Z on the Economic Status of the Profession.

The faculty data used to prepare this report were provided by institutions responding to the AAUP Annual Survey conducted by Maryse Eymonerie Associates, also responsible for editing, processing, and preparing the statistical materials that appear in this report. Any questions concerning these data should be directed to Maryse Eymonerie Associates, P.O. Box 7893, Hilton Head, SC 29938. For additional copies of the report, send a check for $35 to AAUP, 1012 14th Street, N.W., Suite 500, Washington, DC 20005. Prepaid orders only.

Censured Administrations 4
Update 5

CENSURED ADMINISTRATIONS

Investigations by the American Association of University Professors of the administrations of the institutions listed below show that, as evidenced by a past violation, they are not observing the generally recognized principles of academic freedom and tenure endorsed by this Association, the Association of American Colleges, and more than 135 other professional and educational organizations. The 1940 *Statement of Principles on Academic Freedom and Tenure* may be found in the May-June 1990 issue of *Academe*.

This list is published for the purpose of informing Association members, the profession at large, and the public that unsatisfactory conditions of academic freedom and tenure have been found to prevail at these institutions. Names are placed on or removed from this censure list by vote of the Association's Annual Meeting.

Placing the name of an institution on this list does not mean that censure is visited either upon the whole of the institution or upon the faculty, but specifically upon its present administration. The term "administration" includes the administrative officers and the governing board of the institution. This censure does not affect the eligibility of nonmembers for membership in the Association, nor does it affect the individual rights of members at the institution in question.

Members of the Association have often considered it to be their duty, in order to indicate their support of the principles violated, to refrain from accepting appointment to an institution so long as it remains on the censure list. Since circumstances differ widely from case to case, the Association does not assert that such an unqualified obligation exists for its members; it does urge that, before accepting appointments, they seek information on present conditions of academic freedom and tenure from the Association's Washington office and prospective departmental colleagues. The Association leaves it to the discretion of the individual, possessed of the facts, to make the proper decision.

The censured administrations, with dates of censuring, are listed below. Reports were published as indicated by the parenthesized *Bulletin* or *Academe* citations following each listing. Reference should also be had to "Developments Relating to Censure by the Association" and to the "Report of Committee A," each of which appears annually in *Academe*.

South Dakota State College and Universities under South Dakota Board of Regents (September, 1961, 247-55) 1962

Censure was voted specifically on the South Dakota Board of Regents, with respect to a case which occurred at South Dakota State University. Censure was not directed against the local or central administrative officers. The 1982 Annual Meeting determined that the regents also now have sole responsibility with respect to a case which occurred in 1966 at Northern State College (September, 1968, 306-13).

Grove City College (Pennsylvania) (March, 1963, 15-24) 1963

University of the Ozarks (Arkansas) (December, 1963, 352-59) .. 1964

Censure was voted specifically on the Board of Trustees, and not on the institution's administrative officers.

Amarillo College (Texas) (September, 1967, 292-302) 1968

Frank Phillips College (Texas) (December, 1968, 433-38) ... 1969

Central State University (Oklahoma) (March, 1969, 66-77) .. 1969

Southern Arkansas University (March, 1971, 40-49) 1971

Onondaga Community College (New York) (June, 1971, 167-74) 1972

Colorado School of Mines (March, 1973, 73-79) 1973

Rider College (New Jersey) (March, 1973, 93-100) 1973

Camden County College (New Jersey) (September, 1973, 356-62) 1974

Virginia Community College System (April, 1975, 30-38) .. 1975

Concordia Seminary (Missouri) (April, 1975, 49-59) 1975

Houston Baptist University (April, 1975, 60-64) 1975

New York University (May-June 1990, 49-56) 1990

UPDATE

Association News and Developments in Higher Education

Education Nominee Says He Will Back Minority Scholarships

The expected confirmation of Lamar Alexander as education secretary may bring an end to several months of confusion among financial aid officers over the department's policy on minority scholarships. In December, an Education Department official had announced that institutions could not legally reserve scholarships for minority students. Financial aid directors scrambled to reassure students while speculating on how the policy would affect existing programs.

The minority scholarship issue emerged as central during the Senate hearing on Alexander's nomination. Alexander declared that as education secretary he would change the stated policy, saying that the department's statements had "sent out exactly the wrong signal" to minority students and created confusion at colleges and universities.

Some in the higher education community have speculated that Michael L. Williams, assistant secretary of education for civil rights, believed he was in accord with the Bush administration's views on affirmative action when he made his announcements about minority scholarships. "Williams may have thought he was in tune with the prevailing Republican philosophy regarding race and quotas. He wanted to make his mark," says Larry Gladieux, executive director of the College Board's Washington office. Gladieux believes, however, that the impetus for the statements came from the department, not from the White House.

Rutgers University financial aid director Carl Buck expressed surprise that the Education Department did not appear to have discussed the policy internally before announcing it to the public. "Maybe they just floated it as a trial balloon," he says. "Who knows?" Buck reports that Rutgers had carried on with business as usual in the period following Williams's comments, confident that the university's policies fell within legal guidelines.

Richard Black of the University of California, Berkeley, says that in addition to creating confusion, the Education Department sent out the wrong message in "undermining financial aid programs by taking away students' confidence in their availability." Black says that in January the campus's financial aid office sent letters to all affirmative action students, reminding them of Berkeley's ample finacial aid program and expressing hope that the announcement had not caused "undue concern." Black adds that the office has so far received few responses from students. Since a ban on earmarking scholarships would not have affected many existing programs at Berkeley, "the lingering effect would not have been great at all," he says.

Black echoes other financial aid directors in pointing out that the department's statement was an interpretation of current law rather than a creation of the legislative process. "One would expect from the Office of Civil Rights a forum for discussing with the community the rules of awarding such scholarships," he says. "It's poor management on the part of the OCR. We need a full discussion of the full intent of this statement. We need to know what actions are consistent with their intent and what could be considered exceptions."

Blain Butner, an attorney at the Washington, D.C., law firm of Dow, Lohnes and Albertson, which examines financial aid practices, says he has received many questions from financial aid officers asking what to do. "Most schools are nervous," he says. "My advice is to hold tight."

The NCAA: New Momentum for Reform?

Murray Sperber is the author of College Sports Inc.: The Athletic Department vs. the University *and of "Why the NCAA Can't—and Won't—Reform College Athletics"* (Academe, *January-February 1991). At* Academe's *invitation, he provided this report on developments at the NCAA's national convention.*

The newspaper articles on the 1991 NCAA Convention in Nashville, Tennessee, announced that the college presidents had seized control of the association, heralding a new era in college sports. However, loopholes and fine print in the reform resolutions suggest a more problematic future for intercollegiate athletics. In addition, the convention passed other resolutions that could undercut the apparent momentum for reform.

The reforms that athletic directors and coaches liked least—cutting the number of assistant coaches and athletic scholarships and abolishing athletic dorms—do not automatically go into effect and can be amended en route. Roy Kramer, commissioner of the Southeastern Conference, said that his group has already started to "work on an easing of the scholarship reductions from 10 to 5 percent." If his group is successful, Division I-A football teams, instead of having their grant total cut from ninety-five to eighty-five, would end up with ninety players.

Other reforms, such as the limiting of an athlete's *mandatory* playing and practicing time in a sport to twenty hours per week in-season and fewer out-of-season appear to contain major loopholes. The time-limit resolution allows athletes as much *voluntary* practice time as they want, including practice under their coaches' supervision. Critics claim that weight training, tape viewing, and other athletics-related activities will not really become optional because athletes know that their coaches will favor and play those team members who have done the extra training.

New rules on the financing of college sports contradict the apparent movement for reform. By requiring colleges to field more teams (a minimum of fourteen) and to offer more athletic scholarships in non-revenue sports (a minimum of $500,000) in order to remain eligible for Division I men's basketball, the NCAA added extra expenses to the current deficits in many athletic department budgets.

In addition, on the last day of the NCAA meeting, the big-time sports institutions got the association to put through a resolution that allows Division I-A members to increase the amount of financial aid per athlete at their discretion. Many Division I-A athletics departments have long wanted to increase the value of the current "full-ride" athletic scholarship—now covering all tuition, room and board, tutoring, books, and many other expenses—by adding a cash stipend ($700 per month is the most frequently mentioned amount). In the past, institutions in other divisions voted against this plan because they felt that it would professionalize college sports. At the 1991 convention, the smaller institutions gave up their veto on this issue. The door is now open to cash stipends for college athletes as well as major increases in athletic department expenses.

In my opinion, significant reform did not take place in Nashville. Most of the resolutions are not reforms at all and do not address the systemic failure of college sports. As for those few rules that begin the reform process, the current strategy of the athletic directors and coaches is to ambush them on their way to becoming law and amend them to death as they did the three-game cut in the men's basketball season last year.

Search for 1991 Council Candidates

We are beginning the search for Council nominees for the 1992 Council election. We particularly encourage current and former chapter and conference officers to consider becoming part of this elite governing group. If you are interested in running for the Council, or would like more information, contact Iris Molotsky in the Washington Office, 1-800-424-2973.

FACULTY EDITOR OF *ACADEME*

The AAUP seeks to fill the position of Faculty Editor for *Academe*, a faculty oriented journal of higher education published six times a year.

The Faculty Editor, who is normally located on a college or university campus, is expected to visit the AAUP offices on a periodic basis to work with the *Academe* staff.

Responsibilities of the Faculty Editor include: setting general *Academe* policies, within the policy framework of the Association; setting agendas and presiding at an annual meeting of the Editorial Advisory Board; initiating themes and soliciting and evaluating articles for *Academe*; and, when appropriate, conferring with members of the *Academe* staff on matters of production and design.

Emphasis in the selection process will be given to such matters as: familiarity with AAUP policies, knowledge about higher education, previous journalistic experience, ability to engage a general academic audience, and demonstrated ability to work with others in a collaborative situation.

The appointment will be made in October, 1991, with responsibility to begin with the 1992 issue year. The position carries a modest honorarium. Interested persons should contact Iris Molotsky, AAUP, 1012 Fourteenth Street, NW, Suite 500, Washington, D.C. 20005, not later than June 1, 1991. AA/EEO Employer.

Chapter Urges UT-Knoxville to Report Serious Crimes to City Police

The University of Tennessee AAUP chapter recently advanced a proposal that would require Knoxville city police to investigate serious crimes that occur on campus. The university has refused to comply, saying that it will not relinquish jurisdiction to the city.

The alleged rape of a UT student at the university's athletic dorm, and the subsequent discovery that campus police waited six hours before contacting city police, prompted chapter president Dick Penner (English) to write to administration officials in November demanding that they notify Knoxville municipal police immediately of any report of a felony or crimes involving bodily injury. It was only after the much-publicized murder two and a half years ago of a student in a campus fraternity house that the university agreed to involve city police during homicide investigations.

State senator Bud Gilbert has taken steps to introduce a bill during the current legislative session that backs the AAUP position. "We're glad to have some help from the outside," Penner says. The alleged sexual assault led to the suspension of three football players;

the woman eventually withdrew from classes and left campus without pressing charges. "This type of situation should never happen again," Penner says, "but it will if we don't get some changes [in the current laws]."

While Philip Scheurer, vice chancellor for administration and and student affairs, had some minor criticisms of the way campus police handled the incident, he said the university had confidence in its security staff. But Tennessee AAUP conference president Robert Glenn (also on the UT-Knoxville campus) believes that "letting the university stay in control of such an investigation gives it the opportunity to put a 'spin' on the news. . . It's a public relations interest on the part of the university. The administration doesn't want to leave the impression that crime is rampant on campus." The university currently has a policy not to release its crime records, saying that they are part of a student's academic file. Whether crime records should be included as part of academic files is, however, being considered by campus officials.

Glenn says that the chapter has been supported by the UT faculty senate and the local press. "The press is really pushing the issue," he says. "They often have trouble getting information about campus crime because of incomplete reports and unreturned phone calls. The city police department is much more responsive." Concern about the availability of statistics on campus crime prompted passage of the Campus Safety Act by Congress last fall (See Update, November-December 1990).

Chapter president Penner believes that a change in the university's policy will come only from a state mandate. "Vice Chancellor Scheurer is remarkably resistant to pressure from public outcries," he says. "This whole thing could simply blow over."

Freshman Survey Shows Record Interest in Activism

A survey of the 1990 freshman class at American colleges shows that the highest number ever participated in demonstrations in high school and plan to do so in college.

The survey of 277,000 students nationwide was conducted by the Higher Education Research Institute before the outbreak of the Gulf war. It tracks a corresponding surge in interest in social and political issues. A record number of freshmen—43 percent—said it was "essential" or "very important" to influence social values. Race relations and the environment were the issues of deepest concern.

While students continued to list making more money as an important reason for going to college, financial success continued to decline as an "essential" life goal. Careers in business also continued to drop sharply in popularity after reaching a peak in the mid-1980s. Although more students than every planned to pursue a graduate degree, few expressed interest in careers as college professor or researcher.

Breach-of-Employment Case Settled

A jury has found in favor of Elizabeth J. Vandever in her breach-of-employment case (*Vandever v. Junior College District of Metropolitan Kansas City, Missouri*) against the Metropolitan Community Colleges (MCC), awarding her a sum of $267,000. The administration chose not to appeal, and an out-of-court settlement was reached shortly thereafter. The AAUP had investigated actions taken against Vandever and other faculty members by the MCC administration, leading to the imposition of censure in 1984. The Association provided expert testimony and other assistance in connection with Vandever's litigation.

Vandever had filed suit for breach of employment contract in county court as a result of having been furloughed in December 1979 from her tenured position as an instructor of social sciences at MCC, where she had taught full-time since 1972. Under the layoff policy of the institution, a "nonprobationary faculty member's place will not be filled by a replacement within a period of two (2) years unless he/she has been offered reappointment and has declined." Teaching positions for which Vandever was qualified became available in the MCC during the two-year period. The administration, however, appointed several new part-time instructors to fill those positions without first having offered her an opportunity to return to full-time service. Vandever successfully argued that the administration, in appointing part-time people to perform the duties she had performed, has filled her "place" with a "replacement," thus breaching her contract.

Scholarship Fund Helps South African Students

In response to political changes in South Africa, an organization has been formed to help black South African students attend universities. University Scholarships for South African Students (USSAS) raises scholarship funds from the American academic community for promising students who are unable to afford tuition.

Organizers say that greater access to higher education for black students will help prepare a new generation for democratic society. Scholarship recipients are selected by independent committees in Cape Town and Durban, South Africa. They receive full tuition and expenses, and they may attend any of the "open universities" or "black universities" in South Africa. The first two scholarships were awarded in February 1991.

More information on the program can be obtained by writing to USSAS, 107 Buffam Road, Pelham, MA 01002.

Strohm to Step Down as *Academe* Editor

Academe Editor Paul Strohm has announced that he will step down at the end of the 1991 issue year, his sixth in that position. President Barbara Bergmann has named a search committee for his successor, chaired by Phyllis Zatlin (Rutgers), with Abe Peck (Northwestern) and Strohm (Indiana) as its other members. An advertisement for the position appears in this issue of *Academe*. Persons who are interested or who have nominations are encouraged to contact one of the committee members, or Associate Secretary Iris Molotsky in the AAUP's Washington office, no later than June 1, 1991.

Fund to Honor Chapter President and Wife

A fund has been established in memory of the late Dawn and Richard Heikkila, president of the Robert Wood Johnson Medical School chapter of the AAUP at the University of Medicine & Dentistry of New Jersey.

A professor in the department of neurology and a leader in neuropharmacological research, Heikkila served on many national and international committees and was the recipient of a number of federal grants, including the Javits award. In a letter to the school community, Dean Norman H. Edelman called Heikkila's death "a very personal and tragic loss for us at this medical school."

Donations to the Richard and Dawn Heikkila Memorial Fund may be sent to the Department of Neurology, University of Medicine and Dentistry of New Jersey-Robert Wood Johnson Medical School, 675 Hoes Lane, Piscataway, NJ 08854.

AAUP MEMBERSHIP INFORMATION

1991 ANNUAL NATIONAL AND STATE DUES*

State	Full-Time	Entrant II** Public	Entrant I** Joint***	Part-Time Graduate
IL, OH	$102	$77	$51	$25
GA, NY, TN, TX, WA	$98	$74	$49	$24
IN, MA, MN, NE, NC, PA, SC, VA, WV	$94	$71	$47	$23
All Other States	$86	$65	$43	$21

*National Dues are tax deductible as a charitable contribution except for $7.00 attributable to *Academe*.

**Entrant membership is offered to *non-tenured faculty*, new to the AAUP for up to seven years, or until tenured. Entrant I: first 4 years at 1/2 dues; Entrant II: up to 3 years at 3/4 dues.

***Joint membership: Couples with one Full-Time member may enroll a second member at a reduced rate.

MEMBERSHIP BY TRANSFER

☐ **Associate:** $65

Eligibility—An *active* or *graduate student* member who becomes an administrator with less than half a normal teaching or research program.

☐ **Emeritus:** $21

Eligibility—An *active* or an *associate* member retiring for age may request transfer to *emeritus* membership. *Emeritus* members may not vote in elections or at meetings.

After eligibility has been determined and membership recorded, new members will receive acknowledgment individually.

The Future of Academic Salaries: Will the 1990s Be a Bust Like the 1970s or a Boom Like the 1980s?

The Annual Report on the Economic Status of the Profession, 1990–91[1]

The average salary level of college and university faculty of all ranks for academic year 1990–91 is 5.4 percent above the level for 1989–90, which is somewhat lower than the 6.1 percent increase of the previous year. The 1990–91 average salary increase received by continuing faculty for all ranks combined is 6.6 percent, which is down from the 7.3 percent increase reported last year. In addition, the rate of inflation or increase in the cost-of-living, as measured by the change in the Consumer Price Index (CPI), rose faster during the current academic year than it did during the previous academic year. While the CPI rose by 4.8 percent between academic years 1988–89 and 1989–90, it will likely rise by about 6 percent between 1989–90 and 1990–91.

As a result, in real dollars (after adjusting for inflation), the overall average salary level of faculty actually *decreased* by 0.6 percent between 1989–90 and 1990–91. In contrast, in real terms, the average salary levels of continuing faculty rose by 0.6 percent. The former represents the first time since 1981–82 that the real average salary level of all faculty members actually fell. The latter is the smallest annual real increase received by continuing faculty during the last decade, and it is almost two points lower than last year's real increase of 2.4 percent.

THE FUTURE OF ACADEMIC SALARIES

As Table I indicates, the average salary level of all faculty at American colleges and universities decreased in real terms during each year, save one, during the 1970s. The net effect of these changes was that the average salary level of all faculty fell by almost 21 percent in real terms between 1971–72 and 1980–81. In contrast, the average salary level of all faculty increased in real terms every year between 1980–81 and 1989–90 and wound up about 17 percent higher in real terms at the end of the decade than it was at the start. As a result of these changes, the average salary level of all faculty was about 7 percent lower in real terms in 1989–90 than it was in 1971–72. The decline in the average real salary level of 0.6 percent experienced between 1989–90 and 1990–91 leaves the average real salary level of American faculty about 8 percent lower today than it was two decades ago.

Of course, changes in average salary levels will occur for a number of reasons (which are discussed more fully below) in addition to that of faculty members receiving salary increases. For example, if a high-paid full professor retires and is replaced by a lower-paid new assistant professor, other things held constant, the overall average salary level at an institution will fall. Changes in average salary levels thus do not provide a totally accurate picture of how the typical faculty member who has remained at an institution for a number of years has fared. To address this question, the annual survey also collects information on salary increases granted to continuing faculty—faculty who remain at an institution from one year to the next.

The data presented in Table I suggest that between 1971–72 and 1980–81, continuing faculty members' salaries fell, on average, by almost 12 percent in real terms. In contrast, between 1980–81 and 1989–90 continuing faculty members' salaries rose by over 27 percent in real terms. As a result, if a faculty member stayed at the same institution over the entire eighteen-year period and his or her salary increased at the average rate for all continuing faculty members each year, the faculty member's salary would have grown about 12 percent between 1971–72 and 1989–90.

As discussed in last year's report, this represents a real earnings growth of substantially less than 1 percent per year, which provides very little opportunity for faculty members' standards of living to increase during their careers. While faculty members first hired in the early 1980s did not experience the real earnings losses that their more senior colleagues experienced during the 1970s, it is worth noting that the 0.6 percent increase in real terms in the salary that the average continuing faculty member received this year is the lowest increase experienced in terms of purchasing power in a decade.

Real increases in salary levels for continuing faculty that have been achieved in recent years occurred because institutions sought to "catch up" for losses that faculty experienced in the 1970s and because the tightening of academic labor markets has required institutions to raise salaries to retain existing faculty and to attract new ones. In a number of fields, their efforts to do so have resulted in the salaries of new faculty rising relative to earnings opportunities in the nonacademic sector.

Data on the ratio of median academic to median nonacademic salaries of full-time employed doctorates with less than five years of experience in eight fields in the sciences, social sciences, and engineering are presented in Table II for the 1973 to 1987 period and illustrate this point. These data, which come from special tabulations prepared by the National Research Council from its biennial *Survey of Doctorate Recipients*, indicate that while academic salaries fell relative to nonacademic salaries for new doctorates in all of the fields between 1973 and 1981, they rose in all of the fields between 1981 and 1987. Higher salaries in academia for new doctorates relative to salaries in their nonacademic alternatives surely improve the attractiveness of academic careers.

---

[1] Consumer Price Index obtained from the Bureau of Labor Statistics (CPI on standard academic year basis). The change in CPI for the months of February through June 1991 estimated. As soon as the information becomes available, this figure will be revised and published in a subsequent issue of *Academe*.

Notes: Monetary salary is salary measured in current dollars. The percentage increase in real terms is the percentage increase in monetary terms adjusted for the percentage change in the CPI. Figures under All Faculty represent change between salary levels from 1989–90 to 1990–91; figures under Continuing Faculty represent the average salary increase for faculty on staff both years.

One must caution, however, that these data end in 1987. As Table I indicates, real salary level increases for faculty during the last four years of the 1980s were substantially smaller than they were during the previous four years. Hence, it is unclear whether academic salaries in these fields have continued to rise relative to new doctorates' nonacademic alternatives in the years since 1987.

The future of academic salaries will depend upon the interplay of short-run and long-run forces. As calendar year 1991 begins, the nation's economy is in a recession and faces uncertainties associated with the conflict in the Middle East. Numerous state governments are facing substantial budget deficits and, given public resistance to higher taxes, only a few of them are considering raising taxes. To the extent that state budgets have to be balanced by expenditure cutbacks, the short-run prospects for substantial salary increases for faculty employed in public institutions seem quite dim. Almost 70 percent of full-time faculty are employed at public

TABLE II

Relative Median Salaries for New Doctoral Scientists, Social Scientists and Engineers[1]

Field/Year	1973	1975	1977	1979	1981	1983	1985	1987

institutions (Table 16), and state budgetary problems will therefore have a substantial effect on the academic profession at large.

In fact, these problems have already begun to hit home. For example, faculty employed in public institutions in three states—Arizona, Massachusetts, and Mississippi—received no salary increases this past year. This is reflected in this year's detailed statistics that follow, as is for some (but not all) institutions the fact that all faculty at public four-year colleges and universities in Virginia had their salaries reduced by 2 percent in December 1990 to help meet a budgetary shortfall in that state. To take another example, all full-time faculty at four-year SUNY campuses in the state of New York were required to defer one week of their 1990-91 salary. While this will be paid to them upon their retirement at their then-current rates of salary, this loss of one week's pay is equivalent to about a 2.5 percent reduction in salary (for faculty on nine-month contracts) in the current year. This loss of current earnings at the SUNY campuses is *not* reflected in the tables that follow.

Focusing on the short run leaves one pessimistic about the future of academic salaries. However, focusing on fundamental long-run forces leaves one more optimistic. Projections abound that substantial shortages of faculty with doctorates will occur starting in the mid-1990s and last through the first decade of the next century.[2] These shortages are projected to occur for two reasons. First, the demand for faculty will increase due to increasing retirements from an aging professoriate and projected expansions in college enrollments. Second, while the number of doctorates granted by U.S. universities has remained roughly constant in recent years, nonacademic job opportunities are increasingly available to new and experienced doctorates. Doctorate recipients are also increasingly likely to be foreign residents who are less likely than American doctorates to obtain academic appointments in the United States.

To the extent that these projections are accurate, academic institutions will be forced by competitive pressures to increase faculty salaries in an effort to attract and retain faculty. Market forces suggest, then, that once we get past the recession and the (hopefully) short-run fiscal problems that it has created for public institutions, the future for academic salaries is likely to be brighter.

Of course, this assumes that academic institutions will respond to shortages of faculty with doctorates by raising faculty salaries. If salaries of faculty with doctorates do rise substantially, institutions may respond by attempting to hire more faculty without doctorates who presumably are less expensive, on average, than faculty with doctorates.

Is this likely to occur? Many institutions used the relatively loose academic labor markets of the 1970s and early 1980s to increase the proportion of their faculty with doctorates. Data on the percentage of mathematics department faculty with doctorates, which are collected annually by the American Mathematical Society, are presented in Figure 1 for the 1970-71 to 1988-89 period and illustrate this point. During the two decades the percentage of mathematics faculty with doctorates in doctorate-granting institutions rose from 86.8 to 94.0 percent, in master's-degree-granting institutions from 54.6 to 75.0 percent, and in bachelor's-degree-granting institutions from 42.0 to 66.2 percent. Virtually all of the increase occurred during the 1970s; the percentages remained roughly constant throughout the 1980s.

Will institutions respond to the projected tightness in academic labor markets in the 1990s by reversing these trends? To do so would come in conflict with many institutions' aspirations. Such changes might also raise fundamental issues about how teaching and research are conducted in higher education. However, if increased use is made of faculty without doctorates, institutions will face less market pressure to raise faculty salaries during the 1990s.

Pressure to raise faculty salaries is likely to be greatest when institutions are having difficulty attracting and retaining faculty. Faculty leave institutions voluntarily and involuntarily for many reasons including retirement, resignation to accept an alternative academic or nonacademic opportunity, and denial of tenure or nonrenewal of appointment. Clearly, faculty members' decisions, as well as institutional decisions and policies, influence the percentage of full-time faculty at an institution in one year who remain for the following year. Research suggests that differences in salaries across institutions is an important determinant of institutional differences in this *continuation* or *retention* rate.[3] Observing how these rates change over time, especially at the tenured ranks, pro-

---

vides some evidence as to whether institutions are having increasing difficulty retaining faculty.

Table III provides information on the percentage of full-time faculty members remaining on staff for the 1989–90 to 1990–91 and 1988–89 to 1989–90 periods. These retention rates are computed for a sample of institutions that reported comparable data for the two periods and they are reported by category, affiliation and academic rank.

On balance, the overall faculty retention rate of 90.6 percent this year was slightly higher than the 90.3 percent rate reported here for last year. Retention rates rose slightly for most ranks in private-independent and church-related institutions but fell almost one percentage point for the rank of assistant professor in public institutions. Whether the latter reflects higher nonrenewal rates of contracts for nontenured faculty in public institutions, or increased voluntary departures in the face of the worsening economic climate faced by public institutions, cannot be determined from the data.

Not unexpectedly, retention rates in each category/affiliation class tend to be lowest in the predominantly nontenured instructor and assistant professor ranks and highest in the predominantly tenured associate and full professor ranks. A potential major cause of departures from the professor rank is retirement decisions. In the aggregate, the full professor

TABLE III

Percentage of Full-Time Faculty Members Remaining on Staff (Continuing Faculty), by Category, Affiliation, and Academic Rank, 1989–90 to 1990–91 and 1988–89 to 1989–90[1]

Academic Rank	Category:				Affiliation:

[1] Sample includes 1,541 institutions reporting comparable data both years.

retention rate rose from 92.9 percent in 1989–90 to 93.5 percent in 1990–91, so, on balance, increased retirements of older faculty have not yet adversely affected retention rates for full professors.

The future is likely to bring not only changes in the levels of faculty salaries but also changes in the pattern of disciplinary salary differences. As has been documented previously in *Academe* (see Hamermesh, May–June 1988), disciplinary salary differences are currently large and also have been increasing over time.

Evidence to confirm these latter points is presented in Table IV. This table shows the average salary levels in 1989–90 and 1983–84 for full-time faculty, by rank, for twenty fields, as well as the percentage changes in average salaries by field during that period. The data in this table come from a constant sample of fifty institutions which have provided data every year since 1983–84 for the Faculty Salary Survey by Disciplines of Institutions belonging to the National Association of State Universities and Land-Grant Colleges (NASULGC), conducted by the Office of Institutional Research, Oklahoma State University.

Average full-professor salaries in 1989–90 for this set of institutions ranged from a low of $46,201 in the performing arts to a high of $80,458 in law. At the assistant professor level, salaries similarly ranged from $28,212 in the former field to $51,573 in the latter. Furthermore, the differentials between salaries in the two fields have widened in recent years. For example, average salaries of assistant and full professors in law increased by 46.5 and 49.9 percent, respectively, between academic years 1983–84 and 1989–90. The comparable increases in the average salaries of performing arts faculty were 35.1 and 35.7 percent, respectively, during the same period.

More generally, the pattern of widening dispersion of faculty salaries by field can be seen in the following comparisons: in 1983–84, the average salary, across fields, of full professors in the ten highest paying fields was $42,662 and that of full professors in the ten lowest paying fields was $39,583. The former's average rate of salary growth between 1983–84 and 1989–90 was about 46.0 percent, while the latter's was 41.1 percent. So, full professors in higher-paying fields in 1983–84 gained relative to their colleagues in lower-paying fields during the six-year period

Similarly, while associate and assistant professors from the ten highest paying fields in 1983–84 saw their average salary levels rise by 41.4 and 44.0 percent, respectively, by 1989–90, the comparable rates of increase of average salary levels for associate and assistant professors from the ten lowest paying fields during that period were 38.6 and 40.4 percent, respectively. Faculty in these ranks in higher-paying fields in 1983–84 thus also gained relative to their lower-paid colleagues in other fields during that period.

Is the pattern of widening differentials by field likely to persist into the future? To the extent that differences in salaries across fields reflect relative demand and supply patterns, how these variables change over time will determine the answer to this question. One major study has recently projected that, within the arts and sciences, forthcoming shortages of doctorates are likely to be larger in the humanities and social sciences than they will be in other fields. As such, one might expect to observe greater upward pressures on salaries in these fields in the future than on salaries in other arts and science fields. Since the humanities fields (foreign language, letters, performing arts, and philosophy and religion) are among the lowest-paying fields listed in Table IV, such pressures may well lead to a reduction in the dis-

TABLE IV

Average Salary Levels, 1989–90 and 1983–84, and Percentage Change from 1983–84 to 1989–90 for Upper Three Ranks in Major Fields[1]

[1] Special tabulations based on a constant sample of fifty institutions providing data for the Faculty Salary Survey by Discipline of Institutions belonging to National Association of State Universities and Land-Grant Colleges, conducted by the Office of Institutional Research, Oklahoma State University.

persion of faculty salaries across fields during the next decade.

Data on faculty salaries by field for 1990-91 for full professors and new assistant professors are shown in Table V. These data are averages for all institutions who responded to the NASULGC survey this year, not for the constant sample used in the previous table.

Detailed Statistics

The data in Table 1 show that while, overall, the average increase in salary levels was 5.4 percent at institutions with faculty ranks, it was least at category III (two-year colleges with ranks) and highest at category IIB (general baccalaureate) institutions. The average increase in salary levels at public institutions was 5.1 percent, about one percentage point lower than the 6.2 and 6.1 percent average increases reported at private-independent and church-related institutions, respectively. The tendency for average salary levels to increase by less at public than at private-independent institutions exists for all categories of institutions with ranks, with the gap being largest at the category I doctoral-level institutions, where the respective average increases in salary levels were 5.1 and 6.3 percent, respectively. This marks the third year in succession that salary levels have increased by less at public than at private institutions.

Average salary levels at an institution change from one year to the next for two reasons. First, the composition of the faculty changes as some faculty leave the institution involuntarily due to denial of tenure or reappointment, some leave the institution voluntarily to accept appointments elsewhere in the academic or nonacademic sectors, and some depart due to retirement, disability, or death. Those who do leave may be replaced by new faculty in the same or different fields, and the salaries of the latter are not necessarily the same as those of the faculty they replace. Second, salary increases are granted to faculty who remain with the institution over the two-year period. To isolate that factor, Table 1 also reports data on the average percentage increases in salaries for continuing faculty. If colleges and universities tend to replace departing faculty by lower-salaried new faculty, the average percentage increase in salaries for continuing faculty will be larger than the percentage change in average salaries.

The average percentage increase in salaries for continuing faculty with rank this year was 6.6 percent, which is 0.7 percentage points lower than the 7.3 percent average salary increase for continuing faculty that took place last year. Continuing faculty at public institutions received smaller increases than did continuing faculty at private-independent institutions and, save for those at category III institutions, than did continuing faculty members at church-related institutions. As is now usual, average percentage salary increases for continuing professors tend to be smaller than average percentage increases for continuing assistant professors.

Table 2 provides information on the percentage distributions of institutions and number of faculty by average increase in salary levels from 1989-90 to 1990-91. Table 3 pro-

---

[1] Taken from the 1990-91 Faculty Salary Survey by Discipline of Institutions belonging to National Association of State Universities and Land-Grant Colleges, conducted by the Office of Institutional Research, Oklahoma State University.

vides similar information for average increases in salary for continuing faculty. The latter table provides some insights as to why public institutions fared as poorly as they did compared to the private independents this year. While 64.1 percent of all public institutions provided average salary increases for their faculty of at least the rate of inflation, 6 percent, over 75 percent of private institutions provided such increases. In contrast, while 12.1 percent of public institutions provided continuing faculty with salary increases of 4 percent or less, only 6.8 percent of private independent institutions granted increases in this range.

Salary and compensation levels by category and affiliation are reported in Table 4. The average salary level in 1990-91 for all faculty, with rank, is $43,720. The overall average salary for professors is about 35 percent higher than that for associate professors, which in turn is about 21 percent more than the average salary for assistant professors. The relative differences between full professor and assistant professor salaries are largest among four-year institutions at category I doctorate-level institutions and smallest at the category IIB colleges. Average salary levels are higher at the category I (doctoral-level) institutions than they are at the category IIA (comprehensive) institutions and higher at the latter than they are at the category IIB (general baccalaureate) and category III (two-year colleges with ranks) institutions.

Average compensation for all faculty with rank is $54,200. Both average salary and compensation levels are higher at the private-independent institutions than the public ones, with the relative difference being somewhat higher for compensation. One consequence of the continuing smaller average percentage increases for continuing faculty at public institutions is that among category I institutions, average salary and average compensation levels of the faculty at private-independent institutions are now about 20 and 22 percent higher, respectively, than the comparable figures for faculty at public institutions. These differences are slightly more pronounced at the full professor level and one suspects that public doctoral-level institutions are increasingly having difficulty attracting and retaining faculty in the competition with their private sector counterparts.

At other category institutions, public/private-independent differentials are much smaller, and in category III, faculty at public institutions actually tend to receive higher salary and compensation levels than faculty at private institutions. On balance, salary and compensation for faculty are lower at church-related institutions than they are at public or private-independent institutions, although for category I institutions, faculty at church-related and public institutions tend to fare about the same.

Average salaries for male and female faculty by category, affiliation and academic rank are shown in Table 5. Average salaries for men are generally higher than those for women. The average salary of male full professors is $57,080, which is about 13 percent more than the average salary for female full professors of $50,530. The relative differences in average salaries for male and female associate and assistant professors are approximately 8 and 9 percent, respectively. These percent differences are virtually identical to the comparable differences reported in last year's report.

Differences in the average salaries of male and female faculty of a given rank nationally reflect numerous factors. These include difference in the distributions of male and female faculty across categories of institutions, across institutions of different affiliations within a category, across high-paying and low-paying institutions within a given category/affiliation group, across high-paying and low-paying fields within each institution, and across experience cohorts within a field within each institution. Some data that dealt with the role of differences in experience, as proxied by age, in explaining gender differentials in salary were presented in last year's report.

Here we focus on the role of the distributions of male and female faculty across categories of institutions. The average salaries of male professors, associate professors, and assistant professors exceeded the comparable average salaries of female professors, associate professors, and assistant professors by 11, 6, and 10 percent respectively at category I institutions; by 4, 5, and 6 percent respectively at category IIA institutions; by 7, 6, and 4 percent respectively at category IIB institutions; and by 6, 8, and 6 percent respectively at category III institutions. In the main, these gender differentials within categories for each rank are smaller than the comparable overall gender differentials by rank, which suggest that female faculty are more heavily concentrated than male faculty in lower-paying institutional categories. Data presented below in Table 16 confirm that this is indeed the case.

The importance of region as a determinant of nominal average salaries is highlighted in Table 6. Although the Pacific region continues to pay the highest overall average salary for faculty with rank, among category I doctoral-level institutions the highest average salaries continue to be paid in the New England region. A greater share of doctoral institutions in the New England region are private institutions, and given that private doctoral-level institutions tend to pay more than public ones (Table 4), this may at least partially explain the latter finding.

The regional differences in average overall salary that exist continue to be larger than one might expect based on simple cost-of-living differences. The overall average salary of $50,450 in the Pacific region is about 32 percent higher than the overall average of $38,570 paid in the East South Central Region. This difference is somewhat smaller than last year's difference of 35 percent. The data presented in Table 7 on average compensation by rank tell the same story.

In recent years, a number of AAUP members have expressed concern that the data reported on mean salaries in Committee Z's annual report may not provide an accurate representation of the salaries received by the "typical" faculty member. Their concern is that a small number of very highly paid "stars" in some departments, or the existence of a few fields within an institution in which salaries are very high because of the need to attract and retain faculty who have good nonacademic alternatives (for example, law and business), may cause the reported mean salary in a rank to be higher than what the "typical" faculty member in the rank receives.

One way to address this issue is to report data also on median salaries—the average across institutions of the salaries of the individuals who are in the middle of each institution's faculty salary distribution. This is done in Table 8 by category, affiliation, and academic rank for the approximately 60 percent of institutional respondents to this year's survey that also provided data on the distributions of individual faculty salaries by rank (in intervals), and for which we were thus able to calculate median salaries. Because the data in Table 8 come from only about 60 percent of all institutional respondents, the mean salary levels reported in Table 8 differ slightly from the mean salaries reported in Table 4 for the entire sample.

The overall mean salary level for faculty with ranks in these institutions is $44,000, which is about 6 percent higher than the overall median faculty salary of $41,500. However, the percentage difference varies substantially across categories, institutional affiliations, and ranks. The overall mean salary exceeds the comparable median salary at public, private-independent, and church-related institutions by about 5, 11, and 12 percent, respectively. The differential is about 4 percent for professors, 2 percent for associate professors, and 4 percent for assistant professors. Moreover, while for faculty of all ranks at category I institutions the mean salary exceeds the median salary by almost 7 percent, the comparable differentials for categories IIA, IIB, and III institutions are less than 1 percent, 0 percent, and about 2 percent, respectively. Finally, within category I institutions, the differential is highest at private-independent (7 percent) and church-related (over 22 percent) institutions.

The actual percentile distributions of institutions, by average salary and average compensation for each category and rank, are displayed in Table 9. These data show, for example, that institutions which are in the 80th percentile, or top fifth of all institutions by average salary, and are rated 1 in the appendix that follows, must have average salaries for professors of at least $69,400 in category I, $55,800 in category IIA, $47,600 in category IIB, and $47,700 in category III. To achieve a comparable rating of 1 on average compensation, this table indicates that an institution's average compensation for full professors in each of the categories would have to be at least $84,700; $70,100; $59,700; and $60,900, respectively.

Table 10 presents data on the average dollar cost to institutions of faculty benefits, and data on these costs as a percentage of salary, by benefit category. These data are presented in two different ways. First, as has historically been done in this report, the data are presented per faculty member. So, for example, the average institutional cost of tuition benefits was $346 per faculty member in 1990-91. This number, however, gives a misleading estimate of the cost per faculty recipient, because only a minority of faculty at an institution take advantage of the tuition benefit at a point in time. Second, therefore, this year we also report the institutional cost of benefits per faculty recipient. The average institutional cost of tuition benefits per faculty recipient was $2,983 this year.

The average institutional cost per faculty member is lower than the average institutional cost per faculty recipient for each of the benefit categories because faculty members' participation in each of the benefit programs is less than 100 percent. By dividing the cost per faculty member by the cost per participant for each program, one can infer the fraction of faculty participating in the program. So, for example, about 96 percent of all faculty participate in medical insurance programs in which institutions bear at least part of the cost.

In 1990-91, the average institutional costs per faculty member of these major faculty benefits is $10,498, which represents 24.0 percent of the average faculty salary. In 1989-90, major benefits represented 23.4 percent of the average faculty salary. Since benefits increased as a share of salary this year, average faculty compensation also increased at a rate somewhat faster than did average faculty salary.

By far the three most important categories of benefits are retirement, social security, and medical insurance, which together represent almost 90 percent of faculty benefit costs. Average institutional costs for faculty medical insurance rose from $2,154 last year to $2,439 this year, an increase of over 13 percent. Continued high rates of increase in institutional costs for faculty medical insurance and other major faculty benefits invariably will have a depressing effect on the size of salary increases that academic institutions are willing to grant faculty.

According to the data reported in Table 11, the percentage of faculty with tenure at institutions with faculty ranks is somewhat higher at public institutions (65 percent) than it is at private-independent or church-related institutions. In the aggregate the percentage of male faculty with tenure is about 70 percent and the proportion of female faculty is about 45 percent. The former figure is the same as last year's figure while the latter figure is slightly lower than last year's. The latter decline is due primarily to a decrease in the proportion of female assistant professors with tenure, which may reflect that proportionately more females are being hired as new (nontenured) assistant professors.

Of great concern to the profession is the proportion of faculty with tenure-track appointments. Table 12 reports that this year 93 percent of male full-time faculty and 81 percent of female full-time faculty held tenure-track positions. Both of these numbers are slightly higher than the comparable numbers reported last year. A greater percentage of assistant professors, 88, are on tenure track appointments this year than the 86 percent who were on such appointments last year.

Table 13 gives the distribution of faculty members by rank. The rank distribution of faculty varies considerably across institutional categories and types of affiliation. In the aggregate there are more assistant than full professors at category IIB general baccalaureate institutions, while the relationship is the reverse in the doctoral-level category I institutions. Over 45 percent of faculty at private-independent category I institutions are full professors.

Much of the data in earlier tables is summarized in a somewhat different manner in Table 14. This table compactly summarizes salary compensation, benefit, and tenure data in a number of ways. The large number of faculty for whom data is reported in this table—some 356,740 in total—reflects the very high response rate obtained in this year's survey. As described in Table 15, over 87 percent of surveyed institutions responded this year, with the response rate varying from 96 percent for category I institutions to about 79 percent for category III institutions.

Table 16 reports the distributions of faculty by gender, category, and institutional affiliation. The percentage of all full-time faculty that are female has risen slightly from 27.4 last year to 28.3 this year, and small increases in this female percentage also occurred in the aggregate in each of the professor, associate professor, and assistant professor ranks. While similar small increases occurred in the percentages of professors, associate professors, and assistant professors that are female at category I, category IIA, and category IIB institutions, on balance female faculty remain under-represented in the higher-paying category I institutions.

The final appendix table presents data on full-time faculty employment and average salary levels in preclinical departments of medical schools by department, affiliation, and academic rank. These data come from a source other than our own survey. Data in this table are reported on a 12-month basis because the majority of preclinical faculty are on 12-month appointments.

THE COMMITTEE

The number of institutions that responded to this year's survey is the largest in recent memory. The committee is very pleased that so many institutions participated in the survey; high response rates and the accuracy of the data give this report the credibility and respect that it continues to enjoy in the academic community. We are aware of the many requests for information institutional officers receive and are particularly grateful to those who completed our questionnaire (Form MEA22) sent to them by Maryse Eymonerie Associates, which conducts the AAUP Annual Survey.

A special note of appreciation is due to those institutions that responded to the survey questions on the distribution of their faculty by salary levels. This information permitted us to construct Table 8 in the report, which contrasts mean and median salary levels. These tabulations were done in response to comments received from both faculty members and administrators. Committee Z is always interested in receiving suggestions concerning the Annual Report. Similarly we welcome suggestions as to additional issues relevant to the economic status of the profession that we might address. Suggestions can be directed to the committee chair or any member.

It is a pleasure to express the committee's appreciation of Maryse Eymonerie. Over the years, each new chair of Committee Z has quickly grown to appreciate the magnitude of Maryse's efforts and how much she means to the success of our survey. I am no exception.

Finally, I want to express my personal appreciation to the other members of Committee Z for their generous participation in and contributions to the work of the committee: Susan Vroman (Georgetown University), Daniel Hamermesh (Michigan State University), and Debra Barbezat (Amherst College). Hirschel Kasper (Oberlin College), my predecessor as chair of the committee, provided invaluable advice to me and attended our Committee Z meeting, as did Barbara Bergmann and Ernst Benjamin. Louise Russell (Rutgers), an economist with expertise in health cost issues, has recently been appointed to Committee Z, and we look forward to her participation in our activities.

RONALD G. EHRENBERG (Economics)
Cornell University
Chair, Committee Z on the
Economic Status of the Profession

Notes: For the purpose of this survey, the Social Security tax has been calculated at 7.51 percent of the first $51,300 of salary; retirement contribution by the institution (or state) is included regardless of the plan's vesting provision; tuition includes both waivers and remissions; dental insurance might be somewhat underestimated because a number of institutions report cost of the insurance under "medical." Similarly, the medical insurance payments might be somewhat overestimated because dental is sometimes included in the amount reported. For the majority, benefits in kind include moving expenses, housing, and other benefits with cash options. In the case of the public four-year institutions in Texas, it also includes the portion of the employee's contribution to Social Security which is paid by the state (5.85 percent of the first $16,500 of salary). For more details on the reporting of major fringe benefits, see Explanation of Statistical Data preceding Appendix I. Averages for All Combined may not add up because of rounding. Sample includes 2,215 institutions.

Table 17 Number of Full-Time Faculty and Average Salary Levels in Preclinical Departments of Medical Schools, by Department, Affiliation, and Rank, 1990-91*

*Due to unforeseen difficulties in data processing, the Association of American Medical Colleges (AAMC) could not provide the tabulations for the Preclinical Department of Medical Schools at time of publication. This information, however, will appear in a future issue of *Academe*.

EXPLANATION OF STATISTICAL DATA

Instructional Faculty. The instructional staff faculty is defined as those members of the instructional/research staff who are employed on a full-time basis and whose major regular assignment is instruction, including those with released time for research. Institutions are asked to exclude (1) instructional faculty who are employed to teach less than two semesters, three quarters, two trimesters, or two four-month sessions, (2) instructional faculty in preclinical and clinical medicine, (3) instructional faculty who are employed on a part-time basis, (4) administrative officers with titles such as dean of students, librarian, registrar, coach, etc., even though they may devote part of their time to classroom instruction and may have faculty status, (5) undergraduate or graduate students who assist in the instruction of courses, but have titles such as teaching assistant, teaching fellow, etc., (6) faculty on leave without pay, and (7) replacement of faculty on sabbatical leave.

Salary. This figure represents the contracted salary excluding summer teaching, stipends, extra load, or other form of remuneration. Where faculty members are given duties for eleven or twelve months, salary is converted to a standard academic-year basis by applying a factor of 9/11 or 81.8 percent or by the official factor used in a publicly announced formula which is reflected in a footnote in the Appendix Tables of this report.

Major Fringe Benefits. In general, the major fringe benefits include those where the institution (or state) makes a definite payment of a specified amount on behalf of and for the benefit of the individual faculty member. The major benefits include the institution's (or state's) contribution for: (1) Social Security (rate effective January 1, 1990, used), (2) retirement contributions (the employer's contributions are included regardless of the plan's vesting provision), (3) medical insurance, (4) dental insurance, (5) life insurance, (6) disability income protection, (7) unemployment compensation, (8) worker's compensation, (9) tuition for faculty children (both waivers and remissions are included), (10) other benefits in kind with cash alternatives (for the majority, these include benefits such as moving expenses, housing, cafeteria plans or cash options to certain benefits, bonuses, etc.). In the cases of Texas public four-year institutions, it also includes the portion of the employee's contribution to Social Security which is paid by the state or 5.85 percent of the first $16,500 of salary. Since the objective of the study is the measurement of income available for personal consumption, as distinct from professional purposes, benefits of a professional nature (such as convention travel, membership fees, grading assistance, faculty clubs, etc.) are not included.

Compensation. Compensation represents salary plus the institution's (or state's) contribution to major fringe benefits.

Rating of Average Salary and Average Compensation. The rating is based on the actual distribution of average salaries and/or average compensations for comparable institutions. For definition of comparable institutions, see definition of categories and the explanation of ratings in Column (2) (below).

Definition of Categories. The definition of categories given here is that instituted by the Center for Education Statistics and adopted by AAUP for its 1983–84 survey. The center subsequently abandoned this type of classification for a broader system. The roman numerals are used for the purpose of this report with the CES former identification given in parentheses. It should be noted that data on earned degrees were obtained from CES. Because these data have not been available in a timely manner, we ask institutions to assign their own category based on the most recent information available.

Category I (Doctoral-Level Institutions). These are institutions characterized by a significant level and breadth of activity in and commitment to doctoral-level education as measured by the number of doctorate recipients and the diversity in doctoral-level program offerings. Included in this category are those institutions which grant a minimum of thirty doctoral-level degrees annually. These degrees must be granted in three or more unrelated disciplines.

Category IIA (Comprehensive Institutions). These institutions are characterized by diverse post-baccalaureate programs (including first professional), but do not engage in significant doctoral-level education. Specifically, this category includes institutions not considered specialized schools in which the number of doctoral-level degrees granted is fewer than thirty or in which fewer than three unrelated disciplines are offered. In addition, these institutions must grant a minimum of thirty post-baccalaureate degrees and either grant degrees in three or more post-baccalaureate programs or, alternatively, have an interdisciplinary program at the post-baccalaureate level.

Category IIB (General Baccalaureate). These institutions are characterized by their primary emphasis on general undergraduate baccalaureate-level education. These institutions are not significantly engaged in post-baccalaureate education. Included in this category are institutions which are not considered as specialized and in which the number of post-baccalaureate degrees granted is fewer than thirty or in which fewer than three post-baccalaureate-level programs are offered and which either (a) grant baccalaureate degrees in three or more program areas, or (b) offer a baccalaureate program in interdisciplinary studies.

Category III (Two-year Institutions with Academic Ranks). These institutions confer at least 75 percent of their degrees and awards for work below the bachelor's degree.

Category IV (Institutions without Academic Ranks). The majority of these institutions are two-year colleges (see definition of Category III) but do not utilize academic ranks. This category also includes *a few* general baccalaureate institutions which do not use academic ranks. These institutions are listed in Appendix II of this report.

Definition of data presented in Appendixes I and II:

Col. (1) Institution's category—The definition of categories is given above.

Col. (2) Ratings of Average Salary—Each rating represents the percentile interval in which the institution's average salary in a given rank lies (1* = 95th percentile or above, 1 = 80th percentile to 94.9 percent, etc.). An average salary lower than the 20th percentile is rated 5. The ratings have been assigned using the actual average salary which is then rounded to the nearest hundred for publication in Col. (3).

Col. (3) Average Salary by Rank and for All Ranks Combined—This figure represents the average contracted salary (adjusted to a standard academic-year basis, when necessary) excluding summer teaching, extra load, etc., which has been rounded to the nearest hundred dollars; an entry of 43.3 would stand for an average salary between $43,250 and $43,349. The All Ranks (AR) figure includes the rank of lecturer and the category No Rank which are not displayed here.

Col. (4) Rating of Average Compensation—Same definition as that given for Col. (2) above, but for compensation which is salary plus fringe benefits.

Col. (5) Average Compensation by Rank and for All Ranks Combined—This figure represents the average salary plus average fringe benefits and, as for average salary, the figure has been rounded to the nearest hundred dollars.

Col. (6) Benefits as a Percentage of Average Salary—This percentage, which has been rounded to the nearest unit, represents the overall percentage of fringe benefits as a percentage of average salary for all ranks combined. Major fringe benefits are the institution's (or state's) contribution excluding employee's contribution.

Col. (7) Percentage of Tenured Faculty—This figure represents the percentage of tenured faculty in a given rank.

Col. (8) Percentage Increase in Salary for Continuing Faculty—The percentage increase in salary shown here is that for continuing faculty or faculty members remaining on staff in 1990-91. This figure represents an increase in salary for *individuals* as opposed to a percentage *change in salary levels* for a given rank from 1989-90 to 1990-91. For the purpose of reporting this information, the institution is asked to provide data by rank but to report, in the case of promotion, the individual in the rank held in 1989-90. Therefore, the increase shown is that of individuals in the rank held during the 1989-90 academic year. This figure reflects across-the-board, merit increase, promotion and/or other salary increments.

Col. (9) Number of Faculty Members by Rank and by Gender—This number represents the total number of full-time faculty in a given rank.

Col. (10) Average Salary by Rank and by Gender—These figures, like those in Col. (3), have been rounded to the nearest hundred dollars. The average is not shown and is replaced by dashes when the number of individuals in a given rank and/or gender is five or fewer.

Cautionary Notes

With the exception of the number of faculty members shown in Col. (9), other data are not given in any given rank and/or gender when the number of individuals is five or fewer. This policy was adopted to protect the confidentiality of individual salaries and because an average with so few individuals could be misleading when used for comparison purposes. In such cases, dashes appear in the affected columns.

Average Salary and Average Compensation are likely to be affected by a number of peripheral influences. For example, an institution may use a high proportion of part-time graduate assistants whose compensations are not included in the average figures for full-time faculty. Figures for these institutions, therefore, overstate the typical remuneration of those who carry the teaching burden. Average figures for small institutions may also be influenced by the fact that in a given year a relatively large number of their higher paid faculty may be on leave without pay or may have retired. In addition, actual improvements in the economic well-being of the faculty may be concealed in any given year by promotions, which can exercise a double-edged effect upon the average reported in both the higher and lower ranks. The differences between men's and women's salary levels may sometimes be attributed to the relatively large proportion of men in a given rank (see Table 16) and other factors affecting salary levels. Unfortunately, we have found no feasible way to make appropriate adjustments for these occurrences and can only warn the reader to keep these points in mind when using these data.

Institutional footnote numbers are given in the Appendix Tables between the name of the institution and its category. The footnotes for both Appendix I (institutions with academic ranks) and Appendix II (institutions without ranks) are listed at the end of Appendix II.

The following symbols shown under "notes" in the Appendix Tables stand for: PNA = Publication Not Authorized and LFO = Data are for Lay Faculty Only.

The data presented in this report are based on information provided by institutions responding to the annual survey conducted by Maryse Eymonerie Associates for the purpose of the AAUP Annual Report on the Economic Status of the Profession. We continue to be very grateful to those individuals who prepare the institutional responses and complete our questionnaire (Form MEA22). We deeply appreciate the assistance and cooperation given us over the years in connection with this important program.

MARYSE EYMONERIE
Special Consultant to AAUP

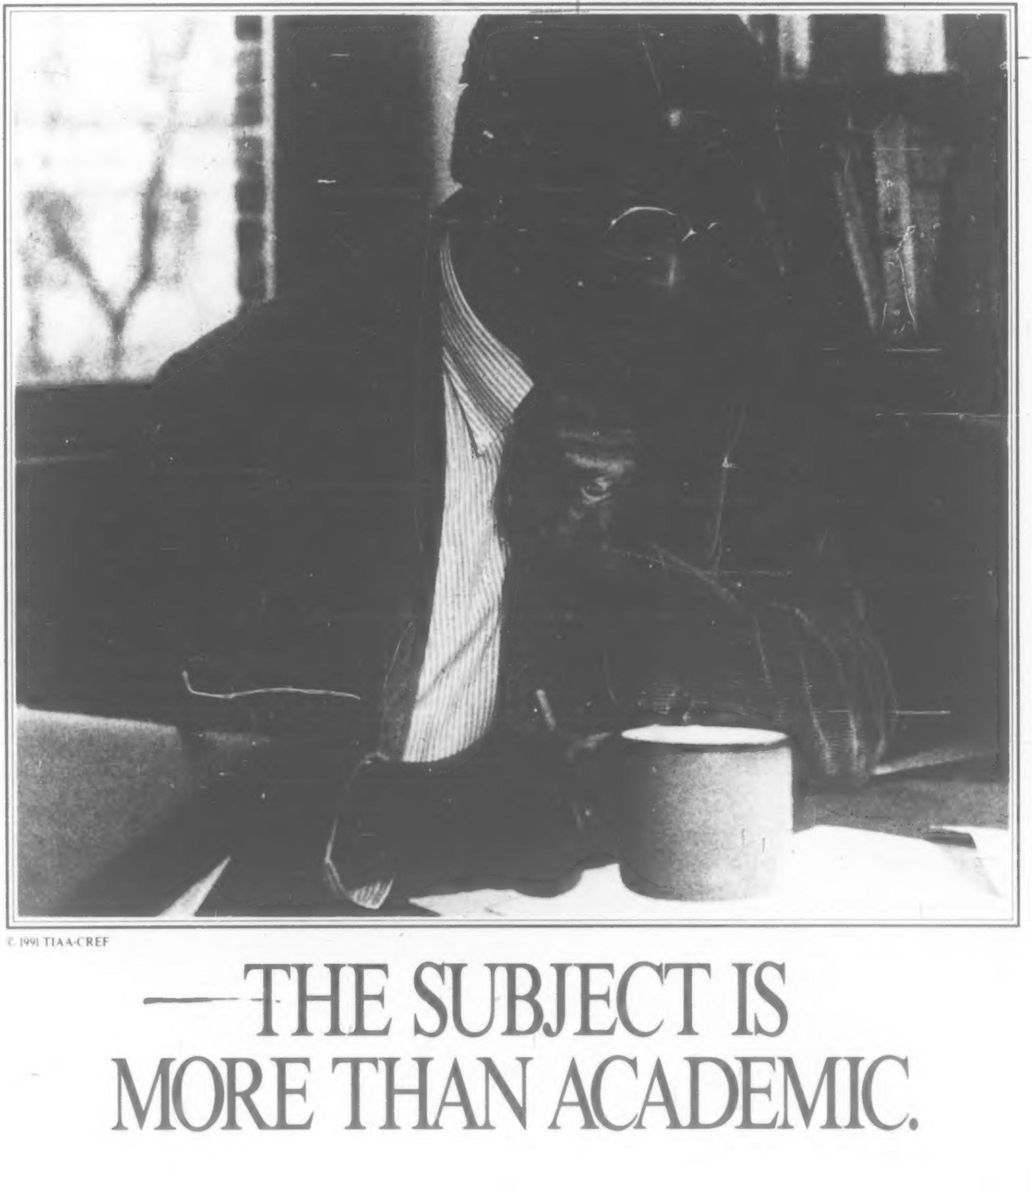
NOTES TO APPENDIXES I AND II

For the purpose of this survey, twelve-month salaries are converted to a standard academic-year basis. A factor of 9/11 (or 81.8%) is used except when an institution provides a different formula. The first twenty-five notes are used to indicate the specific formula provided by the institution.

1. Conversion factor of 75.0%
2. Conversion factor of 76.9%
3. Conversion factor of 80.0%
4. Conversion factor of 83.3%
5. Conversion factor of 85.7%
6. Conversion factor of 90.0%
7. Conversion factor of 86.0%
8. Conversion factor of 86.2%
9. Conversion factor of 84.8%
10. Conversion factor of 86.4%
11. Conversion factor of 86.9%
12. Conversion factor of 90.8%
13. Conversion factor of 92.3%
14. Conversion factor of 87.5%
15. Conversion factor of 91.7%
16. Conversion factor of 91.1%
17. Conversion factor of 76.3%
18. Conversion factor of 76.6%
19. Conversion factor of 85.5%
20. Conversion factor of 71.4%
21. Conversion factor of 82.2%
22. Conversion factor of 83.0%
23. Conversion factor of 94.7%
24. Conversion factor of 84.2%
25. Conversion factor of 78.8%
26. The retirement component does not include the contribution made for unfunded retirement liability.
27. The compensation figures also include a portion of the employee's contribution to the Social Security program which is paid by the state (5.85 percent of the first $16,500 of salary).
28. Data provided by Chancellor's Office of the California Community Colleges. Data are shown under "men" but apply to both men and women combined. Fringe benefits estimated.
29. Average compensation includes the portion of the employee's contribution to Social Security which is paid by the state (5.85 percent of first $16,500 of salary). See note 1.
30. Data reflect the December 1, 1990 two percent reduction of the 1990-91 salary increase.
31. Data include the December 1, 1990 reduction of two percent of the 1990-91 salary increase.
32. *Air Force Institute of Technology*—Fringe benefits have been estimated.
33. *Alverno College*—After five years of employment, faculty are granted continuous employment rather than tenure. See note 1.
34. *American University*—Annual raises become effective at the start of the spring semester; therefore, the figures shown include one half of the annual raise.
35. *Antioch University*—Data also include Antioch College, School for Adult and Exp. Learning, Antioch New England, Antioch Seattle, Antioch Los Angeles, and Antioch Santa Barbara.
36. *Austin College*—The average compensation published in 1989-90 Annual Report should have been 55.0, 42.8, 35.6, and 45.6 instead of 54.7, 42.6, 35.4, and 45.4 for Professor, Associate, Assistant, and All Ranks Combined. See note 1.
37. *Austin Community College*—Data include Austin, Rio Grande, Northridge, Riverside, Eastridge, Southwest Center, Rutherford, and Oaks campuses. See note 1.
38. *Baker College of Flint*—Data include Flint, Muskegon, Cadillac, Owosso, Port Huron, Pontiac, and Mt. Clemens campuses.
39. *Barclay College*—Formerly known as Friends Bible College.
40. *Barton College*—Formerly known as Atlantic Christian College.
41. *Belleville Area College District*—Data include Belleville, Grand City and Red Bud campuses.
42. *Beloit College*—Not included in the salary or compensation figures is a $2000 stipend given each faculty member participating in the new student orientation program.
43. *Black Hawk College*—Data also include the East campus.
44. *Blinn College*—Data include Brenham, Bryan/College Station, FCI Bastrop, and TDC Huntsville campuses.
45. *Cayuga County Community College*—Data do not reflect salary increases since 1988-89. New collective bargaining contract still under negotiations.
46. *Central Community College*—Data include Grand Island, Hastings, and Platte campuses. See note 24.
47. *Charles County Community College*—Data include LaPlata, St. Mary's County and Calvert County Community Colleges.
48. *Chicago City Colleges*—Data includes all eight campuses.
49. *The College of Santa Fe*—Data also include the Albuquerque Center. See note 1.
50. *Columbia University*—Data do not include Applied Sciences Faculty.
51. *Community College of Allegheny County*—Data include Allegheny, Boyce, South, and North campuses.
52. *Community Colleges of Spokane*—Formerly known as Washington State Community College District. Data include Spokane, Spokane Falls community colleges and institutions of extended learning.
53. *Connecticut Community Colleges*—Data include Asnuntuck, Greater Hartford, Housatonic, Manchester, Mattatuck, Middlesex, Mohegan, Northwestern, Norwalk, Quinebaug, South Centra, and Tunxis Community Colleges.
54. *Connecticut Technical Colleges*—Data include Hartford, Norwalk, Thames Valley, Waterbury, State Technical Colleges.
55. *County College of Morris*—No fringe benefits information provided.
56. *Cornell University (Endowed Colleges)*—Data include the College of Architecture, Arts, and Planning, Arts and Sciences, Engineering, School of Hotel Administration, Law School, Johnson Graduate School of Management, and African Studies and Research Center.
57. *Cornell University-Statutory Colleges*—Data include College of Agricultural and Life Sciences, Human Ecology, Industrial and Labor Relations, and Veterinary Medicine.
58. *Davidson College*—1989-90 data revised after publication. Average Salary for rank of Associate should have been 39.5 rather than 39.4; compensation 50.2 rather than 50.3. Assistant average compensation 38.2 rather than 38.4.
59. *Detroit College of Business*—Data include Dearborn, Flint, and Warren campuses.
60. *Eastern Illinois University*—The 1989-90 average salary for men professors should have been 42.7 rather than 42.3; average for men and women combined should have been 42.0 rather than 41.6, and All Ranks Combined 35.0 rather than 34.9.
61. *Eastern Iowa Community College District*—Data include Scott, Muscatine, and Clinton Community Colleges.
62. *El Paso Community College*—Data include Valle Verde, Rio Grande, Transmountain, and Fort Bliss campuses. See note 1.
63. *Embry-Riddle Aeronautical University*—Data also include Daytona Beach, Fla. and Prescott, Ariz. campuses. See note 3.
64. *Fairleigh Dickinson University*—Data include Rutherford, Teaneck, and Madison campuses and Edward Williams College. See note 4.
65. *Florida Atlantic University*—Data include Boca Raton, Broward and North Palm Beach campuses.
66. *Front Range Community College*—Data include Westminster campus and Larimer County Center in Fort Collins.
67. *Gadsen State Community College*—Data include Gadsen, EB, VS, Anniston, Ft. McClellan, and Talladega campuses. See note 1.
68. *Gannon University*—Data also include the Villa Maria campus.
69. *Gateway Technical College*—Data include Kenosha, Racine, and Walworth County Colleges.
70. *Georgia Southern University*—Institutional category published last year was erroneous, should have been IIA (Comprehensive) rather than IIB (General Bacc.). See note 2.
71. *Golden Gate University*—Data also include campus in Ft. Myer, Fla.
72. *Greenfield Community College*—No salary increase given since September 1988. Collective bargaining contract expired June 30, 1989.
73. *Hardin University*—Data also include Harding Graduate School of Religion.
74. *Harrisburg Area Community College*—Data include Wildwood, Lancaster, and Lebanon campuses. See note 3.
75. *Haverford College*—Not reflected in compensation, Haverford offers substantial benefits in the form of subsidized faculty housing or reduced rate mortgages. Based on prevailing rental rates, this subsidy amounts to an additional benefit of at least $3,000 on average.
76. *Hebrew Union College*—Data include Cincinnati, Los Angeles, and New York campuses. Because Hebrew Union, which is predominantly a graduate institution, has a very substantial portion of its faculty at the full professor level at the top of the scale, average salary/comp. reflects an upward skewing that can be deceptive.
77. *Idaho State University*—Data also include Vocational Tech Education Faculty.
78. *Illinois Eastern Community Colleges*—Data include Frontier Community, Lincoln Trail, Olney Central, and Wabash Valley Colleges. See note 1.
79. *Indian Hills Community College*—Data include Ottumwa and Centerville campuses.
80. *Indiana University of Pennsylvania*—Data include Indiana, Armstrong, and Punxsutawney campuses. Data do not reflect the 1990-91 salary increase. See Footnote 26.
81. *Inter American University of Puerto Rico*—Data include Metropolitan and San German campuses, Bayamon and Arecibo University Colleges, School of Law and Aquadilla, Barranquitas Fajardo, Guayama and Ponce Regional Campuses.
82. *Iona College*—Data include New Rochelle and Yonkers campuses.
83. *Iowa Valley Community College District*—Data include Ellsworth and Marshalltown Community Colleges.
84. *J. Sargeant Reynolds Community College*—Data include Downtown, Parham Road, Western and Richmond campuses.
85. *Lewis-Clark State College*—Data include both academics and vocational education faculty.
86. *Lincoln College*—Data include Lincoln and Normal campuses.
87. *Linfield College*—Data include McMinnville and Portland Campuses.
88. *Long Island University*—Data include C.W. Post, Brooklyn, Southampton, Brentwood, and Rockland campuses.
89. *Los Angeles College of Chiropractic*—Data include main campus plus satellite clinics.
90. *Louisiana State University and A&M College*—Data also include Louisiana State University Agricultural and Hebert Law Center.
91. *Manatee Community College*—Data include Bradenton and South campuses.
92. *Maricopa Community College District*—Data include Phoenix, Glendale, Gateway, Mesa, Scottsdale, Rio Salado, and South Mountain campuses.

93. *Mercer University*—Data include Macon, Northwest and Pharmacy School in Atlanta campuses.
94. *Metropolitan Community Colleges*—Data include Longview, Maple Woods, and Penn Valley Community Colleges.
95. *Metropolitan Community College*—Data include Omaha, Fort Omaha, Elkhorn Valley, South Omaha, and Fremont Center campuses. See note 17.
96. *Miami-Dade Community College*—Data include Miami, North, South, Homestead, Welfson, and Medical Center campuses. Standard academic year basis estimated by dividing twelve-month salaries by 227 by 207 and taking 90 percent of sum.
97. *Mid Plains Community College Area*—Data include Mid Plains and McCook Community Colleges.
98. *Middlesex Community College*—Data include Bedford, Burlington, and Lowell campuses. The collective bargaining agreement expired June 1989 and no salary increase is reflected in these data.
99. *Midlands Technical College*—Data also include the Airport and Beltine campuses and off-campus locations.
100. *Millersville University of Pennsylvania*—See notes 1 and 26.
101. *Milwaukee Area Technical College*—Data include the Main campus at Milwaukee and the North, South, and West campuses.
102. *Mohave Community College*—Data include Kingman, Lake Havasu City, and Bullhead City campuses.
103. *Mississippi Gulf Coast Community College*—Data include Perkinston, Jefferson Davis, and Jackson County campuses. See note 6.
104. *Mohawk Valley Community College*—Data include Utica and Rome campuses.
105. *Mt. San Jacinto College*—Data include San Jacinto and Menifee Valley campuses.
106. *National-Louis University*—Data include Evanston, Chicago, Lombard, Ill., Saint Louis, Mo., McLean, Va., Milwaukee/Beloit, Wis., Tampa, Fla., Atlanta, Ga., and Heidelberg, Germany campuses. See note 22.
107. *New York Institute of Technology*—Data include Old Westbury, Metro Center, and Central Islip campuses.
108. *North Shore Community College*—Data include Beverly and Lynn campuses. No salary increase given since 1988 due to state fiscal problems.
109. *Northeast State Technical Community College*—Formerly known as Tri-Cities State Technical Institute.
110. *Norwich University*—Data also include Military College of Vermont and Vermont College.
111. *Notre Dame College*—Fringe benefits do not include religious members who are included in the salary figures.
112. *Oakland City College*—Data also include Bedford College Center.
113. *Pace University*—Data include New York, Pleasantville, and White Plains campuses.
114. *Pennsylvania State University-IIA Campuses*—Data include Erie-Behrend, Harrisburg-Capital, and Great Valley Center. See note 26.
115. *Pennsylvania State University-III Campuses*—Data include Allentown, Altoona, Beaver, Berks, Delaware, DuBois, Fayette, Hazelton, McKeesport, Mont Alto, New Kensington, Ogontz, Schuylkill, Shenango, Valley, Wilkes-Barre, Worthington, Scranton, and York campuses. See note 26.
116. *Polk Community College*—Data include Winter Haven and Lakeland campuses.
117. *Rancho Santiago Community College District*—Data include Santa Ana and Orange campuses, Garden Grove Centennial Education, and Orange Adult Learning Centers.
118. *College of the Redwoods*—Data include Eureka, Mendocino, and Del Norte campuses.
119. *Reformed Theological Seminary*—Data also include the Orlando Extension campus.
120. *Rollins College*—Data include Winter Park and Brevard campuses.
121. *Saint Joseph's College*—Data apply to lay faculty only.
122. *Saint Peter's College*—Data include Jersey City and Englewood Cliffs campuses.
123. *Salt Lake Community College*—Data include both the Salt Lake City and Sandy campuses. See note 3.
124. *San Jacinto College District*—Data include Central, North, and South campuses.
125. *San Joaquin Delta College*—Negotiations still underway at time of submission. Therefore, data do not reflect 1990-91 salary increase.
126. *Sauk Valley Community College*—Data do not reflect 1990-91 salary increase. Negotiations still underway at time of submission.
127. *Southeast Community College*—Data include Beatrice, Lincoln, and Milford campuses.
128. *Southeastern Illinois College*—Data do not include off-campus site in correctional institutions.
129. *Southern College Seventh-Day Adventist*—Data include Collegedale and Orlando campuses.
130. *SUNY at Buffalo and Stony Brook*—Data also include the Health Sciences Faculty.
131. *Stetson University*—Data include DeLand and Saint Petersburg campuses.
132. *Sul Ross State University*—Data include Alpine and Uvalde campuses. See footnote 29.
133. *Syracuse University*—Data also include College Center of the Finger Lakes, Mid-Hudson, Rome, and Endicott-Owego Graduate Centers.
134. *Technical College of the Lowcountry*—Data include Beaufort, Hampton Extension, and Hilton Head campuses.
135. *Teikyo Westmar University*—Formerly known as Westmar University.
136. *Tennessee State University*—Data also include Avon N. Williams campus.
137. *Texas Women's University*—Data include Denton, Dallas, and Houston campuses. See footnote 27.
138. *Transylvania University*—Substantial supplements for excellence in teaching not included in salary but reflected in compensation.
139. *Trinity Valley Community College*—Data include Athens, Palestine, Terrell, and Kaufman campuses.
140. *Troy State University*—Data also include Troy, Nursing, and Phenix City campuses.
141. *Tufts University*—Data include the Arts and Sciences, Fletcher School of Law and Diplomacy, the Dental School, the School of Veterinary Medicine, and the School of Nutrition.
142. *Union County College*—Data include Cranford, Scotch Plains, Elizabeth, and Plainfield campuses.
143. *University of Alabama at Birmingham*—Data apply to the University General Schools.
144. *University of Alaska-Anchorage*—Data include Anchorage campus and Kenai. Peninsula, Kodiak, and Matanuska-Susitna campuses.
145. *University of Alaska-Fairbanks*—Data include Fairbanks, Shukchi, Kuskokwim, and Northwest campuses.
146. *University of Alaska-Southeast*—Data include Juneau, Ketchikan, and Sitka campuses.
147. *University of California System*—Data do not reflect the January salary increase. This year, the fringe benefits are significantly higher because the retirement component reflects normal cost to defined plan. A factor of 86.3 was used to convert twelve-month salaries to standard academic basis.
148. *University of Kentucky Community Colleges*—Data includes all thirteen campuses.
149. *University of Lowell*—Data do not reflect salary increase. Negotiations underway at time of submission.
150. *University of Puerto Rico-Mayaguez Campus*—Data shown under "men" are for both men and women combined.
151. *University of Rhode Island*—Data also include Narragansett Bay campus.
152. *University of St. Thomas*—Data also include School of Theology at St. Mary's Seminary.
153. *University of San Francisco*—Data shown under "Men" are for men and women combined. Number of men: 83, 31, and 26 women: 16, 19, and 12 for Professor, Associate, and Assistant ranks, respectively. Fringe benefits estimated.
154. *University of Southern Maine*—Data include law faculty.
156. *University of Texas-Pan American*—Data also include Brownsville campus. See note 27.
157. *University of Washington*—The All Ranks Combined average salary and average compensation for 1989-90 should have been 46.3 and 56.9 rather than 46.0 and 56.6, respectively.
158. *Temple University*—The 1989-90 average salary by rank published at 56.0, 44.4, 36.0, 30.1, and 46.7 were revised in June of 1990. The revised figures were 55.9, 44.3, 35.7, 29.8, and 46.5 for Professor, Associate, Assistant, Instructor, and All Ranks combined, respectively.
159. *Wagner College*—Fringe benefits this year do not include cost of Medical insurance. New plan under consideration at time of submission.
160. *Walla Walla Community College*—Data include Walla Walla, Clarkson and Washington State Penitiary.
161. *Washington and Lee University*—Data do not include law faculty.
162. *Wayne County Community College*—Data include Downtown, Northwest, Eastern, Downriver, and Western campuses.
163. *Wenatchee Valley College*—Data also include the North campus at Oamk, Washington.
165. *West Valley-Mission CC Dist.*—Data include West Valley and Mission Colleges.
166. *West Virginia Northern Community College*—Data include Wheeling, Weirton, and New Martinsville campuses. See note 1.
167. *Western Michigan University*—Data do not reflect the January, 1991 salary increase.
168. *Western Nevada Community College*—Data include Carson City and Fallon campuses. See note 4.
169. *Western Nebraska Community College*—Data include Scottsbluff and Sidney campuses. A factor of 69.6 used to convert 12-month to standard academic year.
170. *Whittier College*—Data include Whittier College and Whittier College School of Law.
171. *Williams Baptist College*—Formerly known as Southern Baptist College.
172. *Wilmington College*—Data also include Cincinnati Br., Lebanon, and Warren Correctional campuses.
173. *Winona State University*—Data include Winona and Rochester campuses.
174. *Yavapai College*—Data include Prescott, Verde, and Coconino Extension campuses.

TIAA-CREF PRESENTS
THE PRINCIPLES OF SOUND
RETIREMENT INVESTING.



© 1991 TIAA-CREF

—THE SUBJECT IS
MORE THAN ACADEMIC.

For a while, it seemed that investments only went up—and the higher the risk, the bigger the gain. Nowadays, many investors are learning that the risks are real. What goes up *can* come down.

But how well your retirement investments perform throughout your career can determine how well you'll live when you retire. Especially in times like these, it's important to know that your retirement funds are well-managed. But how do you judge? Consider these principles:

RETIREMENT INVESTING IS LONG TERM

A long-term view helps you avoid short-term risks. When you make steady contributions to your retirement plan over long periods, you minimize the effects of market fluctuations, *and* you gain the advantages of compounded growth and interest.

TIAA, an insurance company, backs your traditional annuity with long-term mortgages, bonds, and real estate investments. And TIAA's size and strong capital base mean it can ride out swings in the market—buying or selling only when the time is right.

The bottom line: *because of its stability, sound investments, and overall financial strength, TIAA has received the highest possible ratings from all three of the industry's leading independent rating agencies—A+ (Superior) from A.M. Best Co., Aaa from Moody's, and AAA from Standard & Poor's.*

DIVERSIFY FOR SAFETY AND GROWTH

A diverse mix of quality investments helps protect you from market volatility and lets you benefit from the strengths of several types of investments. Most retirement experts recommend diversification as the key to successful retirement savings.

You get opportunities for widespread diversity with each of CREF's variable annuity accounts. The CREF Stock Account holds a broad portfolio of domestic and foreign stocks, and CREF's Social Choice Account invests in a balanced portfolio of stocks, bonds and money market instruments. CREF's Money Market and Bond Market Accounts offer you further avenues to diversification.

TAKE APPROPRIATE RISKS—NOT MORE

Try to strike a balance. Be conservative enough so the resources will be there when you need them. But look for enough growth potential that your retirement income will support the kind of retirement you want.

PAY ATTENTION TO PERFORMANCE

Compare your investments' performance to their stated objectives. Have they done what they said they would do? Over long periods?

TIAA's strong returns have led the industry for over forty years.[1] TIAA guarantees your principal and a specified interest rate. And it provides the opportunity for dividends—which we've declared every year for over forty years.

The CREF Stock Account has beaten the mutual fund industry average for the past one-, five- and ten-year periods.[2] Though the market has turned down during the last two quarters, CREF's long-term record continues to be strong. And it's no wonder. CREF was among the first in the industry to enter international markets, divide its portfolio into active and indexed segments, and develop sophisticated investment research methods.

LOOK FOR INVESTMENT EXPERTISE

Finally, retirement investing is a specialized skill, so look at who is managing your retirement savings. TIAA and CREF are recognized experts in retirement investing, with over 70 years of experience serving the academic community.

In fact, we've done so well, for so many, for so long that TIAA-CREF is now the largest retirement system in the world, with over $80 billion under management.

When you consider the principles of good retirement investing, you'll see why over one million people consider TIAA-CREF the best choice for their retirement savings. To find out more, call our **Participant Information Center at 1 800 842-2776.**

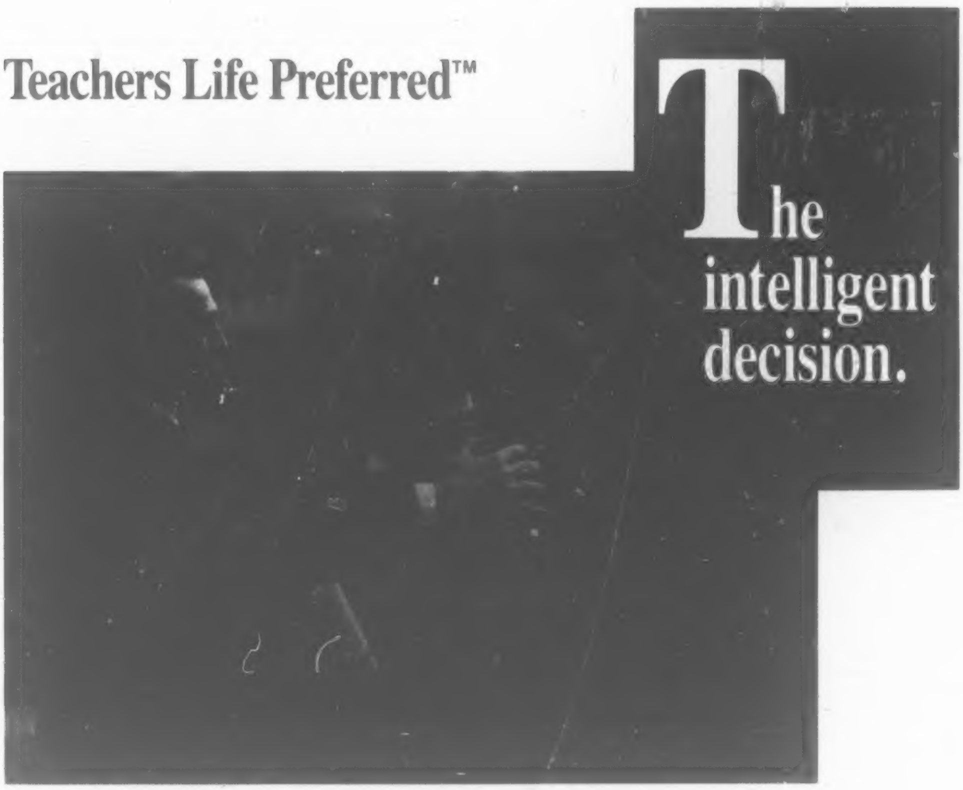
Teachers Life Preferred™



The intelligent decision.

As an education professional, you know that an intelligent decision can make all the difference. And that's why it's so important for you to know about Teachers Life Preferred—the new individual annual renewable term life insurance policy from TIAA.

Teachers Life Preferred features one of the lowest cost policies available anywhere, with even lower rates for non-smokers. This special coverage was specifically designed to meet the needs of educators and researchers.

TIAA has established its record for providing low cost insurance and high quality professional service for over 72 years. Since the introduction of Teachers Life Preferred earlier this year, your colleagues have made the intelligent decision to accept this new protection opportunity in unprecedented numbers. They recognize TIAA's good value and strong standing as the nation's preeminent insurance and retirement specialist, dedicated exclusively to educators throughout the country.

FRINGE BENEFITS: UNDER ATTACK

FEATURES

Resisting the Benefits Cost Burden 10
MARK C. BLUM
Faculty intervention, emphasizing mutual faculty-administrative gains, can alleviate soaring medical costs.

The Stagnant Fringe 13
DANIEL S. HAMERMESH AND STEPHEN A. WOODBURY
Faculty complacency that followed changes in the tax code may explain why benefits reached a plateau after 1986.

Retrenchment, Retirement Benefits, and the Faculty Role 18
CHRISTOPH K. LOHMANN
Faculty benefits committees face special problems on non-collective-bargaining campuses—but can still be effective.

The Future of Fringe Benefits: An Interview 22
Mary Jane Calais, a management specialist, tells us what we've suspected about administrations and benefits: hard choices will have to be made.

Post-Tenure Review and Faculty Revitalization 53
MARIANNE WESSON AND SANDRA JOHNSON
It's time to emphasize the developmental purposes for which post-tenure review was originally intended.
